PROFILE SUMMARY

Software Engineer with 3+ years of experience building customer-facing, UI-heavy features in React.js, Next.js, TypeScript, and modern JavaScript (ES6+) for enterprise SaaS platforms. Strong grounding in React fundamentals — functional components, Hooks, and state management (Redux) — with hands-on experience translating UX designs into performant, accessible, and maintainable production UI. Proven track record integrating REST APIs, building reusable/modular component libraries with Node.js-based backends, and driving unit and integration test coverage from near-zero to 80%+ across two production platforms. Comfortable working within Agile/Scrum teams, collaborating closely with Product, Design, and Backend engineers, and contributing to code reviews and CI/CD-based release processes.

TECHNICAL SKILLS

Frontend: React.js (Hooks, functional components, Context API, Redux for state management), Next.js, React Router, performance optimization (memoization, lazy loading, code splitting), TypeScript, JavaScript (ES6+, closures, promises, async/await), HTML5, CSS3, responsive design, Vue.js, Lit.dev, micro-frontend architecture

Quality & Testing: Vitest, unit testing, integration testing, mocking, test coverage, ESLint, code reviews

APIs & Backend: REST API design & integration, Node.js, FastAPI, Python, JWT authentication

Accessibility & UX: WCAG-compliant UI implementation, design-to-code translation, cross-browser/responsive UI

Tooling & Practices: Git, GitHub, CI/CD pipelines (GitHub Actions), Docker, Agile/Scrum ceremonies, sprint planning, Husky pre-commit hooks

WORK EXPERIENCE

Omnicom Media — Gurugram, India Apr 2023 – Jun 2026

Software Engineer

GeoLift — Geo Experimentation & Incrementality Platform

- Owned front-end build and test systems, increasing unit and integration test coverage from near-zero to 80%+ across 40+ test files, cutting recurring regression bugs and strengthening release confidence
- Built reusable, modular React.js/TypeScript and Lit.dev components using Hooks and shared state patterns, reducing development time for new reporting features by an estimated 25–30%
- Implemented client-side routing with React Router and performance optimizations (memoization, lazy loading, code splitting) across key application flows, improving load times and navigation
- Translated UX designs and wireframes into production-ready, technically feasible UI, resolving 10+ critical UI defects across rendering, data mapping, and table/layout components
- Implemented WCAG-compliant, accessible styling across key application flows, improving usability for screen-reader users and aligning UI with accessibility best practices

Omni Video Intelligence (OVI) — YouTube Targeting and Content

- Built reusable core UI components (list tables, exclusion lists, forms) adopted platform-wide across a B2B SaaS tool used by 35+ brands in 5 countries, reducing duplicate code by an estimated 20%
- Collaborated with backend and DevOps engineers to design and integrate 5+ REST API endpoints, including Google's YouTube Data API, connecting the frontend to a platform managing 650K+ records
- Built an audit-trail UI for distribution history tracking, improving transparency for users managing 50+ active campaigns

Marketing Mix Modeling (MMM) & Meridian

- Drove unit test coverage to 80%+ and implemented ESLint + Husky pre-commit hooks plus GitHub Actions CI/CD pipelines, improving code quality and cutting code review turnaround time for a team of 6+ engineers
- Designed and built the Meridian onboarding flow from scratch — file upload, form validation, and multi-step navigation — using React, Context API, and Redux for state management
- Built a FastAPI backend validation endpoint integrated with the React upload workflow, returning descriptive errors and reducing client-side validation complexity
- Built KPI dashboards with Highcharts.js, reducing time-to-insight for analysts by an estimated 30%

SocialKit — Suite of Tools for Facebook Advertising

- Built real-time campaign dashboards (Vue.js, Vuex, Chart.js) and automated data sync via third-party REST API integrations, collaborating cross-functionally with backend engineers

PERSONAL PROJECTS

AI Chatbot — Claude API, Agent-Based Tool Orchestration & Function Calling

- Built a chatbot integrating the Claude API with agent-based tool orchestration via function calling to dynamically fetch external API data based on user intent — a multi-step, event-driven LLM/agent workflow. Deployed via Vercel serverless functions; UI built with React, ShadCN UI, and GitHub Actions CI/CD.

Todo Application (FastAPI, PostgreSQL)

- Built a production-style REST API end-to-end (JWT auth, Alembic migrations, scoped data access) to demonstrate backend fundamentals beyond frontend work

CERTIFICATION

Vue.js 3 Essential Training (LinkedIn, 2024) | React Essential Training (LinkedIn, 2024) | Learning Jira Software (LinkedIn, 2025) | FastAPI – The Complete Course 2026 (Udemy, 2025) | SQL (Udemy, 2022) | Tailwind CSS 3 Essential Training — LinkedIn Learning | UiPath Agentic Prompt Engineering — UiPath

AWARDS & RECOGNITION

- Annalectual of the Quarter — Technology, Annalect India (Apr 2025) — awarded for consistent, exceptional performance
- On the Spot Award, Annalect India (Aug 2025) — recognized for delivering exceptional performance
- On the Spot Award, Omnicom Global Solutions (Feb 2026) — recognized for exceptional performance and dedication

EDUCATION

Guru Gobind Singh Indraprastha University 2018 – 2022
B.Tech — Mechanical and Automation Engineering (8.8/10)
